

HR Analytics Dashboard Project Report

Project Overview

The HR Analytics Dashboard is an end-to-end data analytics project developed using Excel and Power BI. The objective of the project was to analyze employee attrition, workforce demographics, salary distribution, and departmental performance to identify factors influencing employee turnover.

Tools Used

- Microsoft Excel
- Power BI
- DAX
- Data Visualization
- Exploratory Data Analysis (EDA)

Business Problem

Employee attrition impacts organizational productivity and increases recruitment costs. The goal of this project was to identify patterns and factors contributing to employee turnover and provide actionable insights for HR decision-making.

Key KPIs

- Total Employees: 1470
- Attrition Count: 237
- Attrition Rate: 16.12%
- Average Age: 36.92
- Average Salary: 6.50K

Analysis Performed

- Attrition by Department
- Attrition by Gender
- Attrition by Age Group
- Attrition by Education Field

- Employee Distribution by Job Role
- Average Salary by Department

Key Insights

1. Overall attrition rate is 16.12%.
2. Research & Development has the highest attrition (133 employees).
3. Sales department has the highest average salary.
4. Sales Executive is the largest job role.
5. Employees aged 26–35 represent the largest workforce segment.
6. Life Sciences employees show higher attrition compared to other education fields.

Recommendations

- Improve retention strategies in Research & Development.
- Conduct employee satisfaction surveys.
- Review compensation structures in departments with high attrition.
- Develop career growth programs for high-risk employee groups.
